

Project Design Phase-II

Data Flow Diagram & User Stories

1. Data Flow Diagram (DFD)

The DFD represents how a network request moves through the Automated Network Request Management system in ServiceNow—from submission by the requester to approval, record creation, fulfillment, notification, and closure.

DFD Flow

Requester → Submit Network Request → Validate & Route for Approval → Create Network Record/Task → Fulfill Request → Send Notifications & Close Request

The main data stores represented are:

- **D1 – Service Catalog:** Stores the catalog item and request variables.
- **D2 – Request Record:** Stores submitted network-request information.
- **D3 – Network Records:** Stores network-related records/tasks.

- **D4 – Notification Log:** Records notification information.

The workflow includes approval handling and can optionally integrate with network automation tools. This reflects the project's Flow Designer implementation using **Get Catalog Variables, Create Record, Ask for Approval, Flow Logic, Send Email, and Update Record**.

2. User Stories

ID	User Story	Priority
US01	As an employee , I want to submit a network request through a self-service portal so that I can request network services easily.	High
US02	As an employee , I want to provide all required request details through a structured form so that my request can be processed correctly.	High
US03	As a system , I want to validate and route requests for approval so that requests reach the appropriate approval process.	High
US04	As an approver , I want to review and approve/reject network requests so that only authorized requests are processed.	High
US05	As a system , I want to automatically create network records/tasks after approval so that the IT team can begin fulfillment without unnecessary manual work.	Medium
US06	As a network technician , I want to view assigned tasks and update their progress so that requests can be fulfilled efficiently.	High
US07	As an employee , I want to track the status of my network request so that I know its current progress without repeated follow-ups.	High
US08	As a system , I want to send notifications at important stages so that users and IT teams remain informed.	Medium
US09	As an IT manager , I want to view request reports and analytics so that I can monitor workload, resolution time, and SLA performance.	Medium

Design Goal

The overall design aims to provide a **seamless, transparent, and automated experience for raising, approving, fulfilling, and tracking network requests**, while reducing repetitive manual work for IT teams. This is consistent with the project's stated objectives and key features.
