

User Acceptance Testing (UAT)

User Acceptance Testing is performed to verify that the **Automated Network Request Management System** meets the expected business requirements and provides a simple, reliable experience for end users.

Note: The test results in the image are sample/illustrative values. Replace the Pass/Fail results with your actual testing results.

UAT Objectives

- Verify that users can submit network requests successfully.
- Confirm that all required request information is captured.
- Verify approval and rejection workflows.
- Confirm that network records are created correctly.
- Verify email notifications.
- Check request status updates and closure.
- Ensure the system is easy and convenient for users.
- Identify defects and collect user feedback.
- Confirm that the solution satisfies the project requirements.

UAT Test Cases

ID	Test Case	Expected Result
UAT-01	Open Network Request Catalog	Catalog item opens successfully
UAT-02	Fill Request Form	Required information is captured
UAT-03	Submit Request	Request is submitted successfully
UAT-04	Record Creation	Network record is created correctly
UAT-05	UI Policies	Fields behave according to selections
UAT-06	Approve Request	Request moves to approved state
UAT-07	Reject Request	Request moves to rejected state
UAT-08	Email Notification	Appropriate notification is generated
UAT-09	Fulfillment Update	IT/Network team can update the request

ID	Test Case	Expected Result
UAT-10	Close Request	Completed request is closed successfully
UAT-11	Reports	Request information is displayed correctly
UAT-12	End-to-End Workflow	Complete request lifecycle works correctly

UAT Process

Prepare Test Cases → Execute with Users → Collect Feedback → Identify Issues → Fix & Retest → Obtain Final Sign-off

Acceptance Criteria

The system is considered acceptable when:

- All critical UAT scenarios work correctly.
- Request information is captured accurately.
- Approval and rejection processes work as expected.
- Notifications are generated correctly.
- Records are updated throughout the lifecycle.
- Major defects are resolved.
- Users are satisfied with the system.
- Stakeholders provide final approval.

The UAT image above can be included directly in your documentation as the **User Acceptance Testing** diagram.
