

Project Design Phase

Problem – Solution Fit Template

Date	27-8-2026
Project Name	Automated-Network-Request Management
Maximum Marks	4 Marks

Problem–Solution Fit Summary

Problem:

Network requests require multiple manual activities, including information collection, routing, approvals, record creation, fulfillment, and communication.

Solution:

A centralized **Automated Network Request Management system in ServiceNow** automates these activities through the Service Catalog and Flow Designer.

Value Proposition:

A standardized and automated network-request process that improves processing speed, approval efficiency, transparency, and communication while reducing repetitive manual work for IT teams.

The project specifically uses automated notifications, task assignments, approval processes, and workflow automation to streamline request fulfillment
